

Derian André Castillo Franco

Senior AI Fullstack Engineer

Architecture, secure delivery and AI engineering infrastructure.

Querétaro, México (UTC-6) / +52 (33) 1278-1411 / derianandre.com / hola@derianandre.com / [LinkedIn](#) / [GitHub](#)

AI engineer who works from first principles, a habit from nanotechnology engineering that I now apply to software architecture. I work as an augmented engineer: I orchestrate AI agents and generative workflows to ship with a researcher's depth and an architect's precision. As engineering lead of a production fintech platform on AWS, I built the AI infrastructure that took the team to 85% verifiable AI-assisted commits while holding 90.7% API test coverage and DORA Elite lead times.

Skills

AI	Claude, Claude Code, MCP connectors, agentic workflows, custom agent harnesses (skills, agents, rules), prompt engineering
Frontend	JavaScript TypeScript React Next Vue Nuxt Angular Jest jQuery HTML5 CSS3 SASS
Backend	Node Express Nest TypeORM Prisma SQL MongoDB Mongoose REST GraphQL WebSockets Python
Cloud	AWS (ECS Fargate, IAM) GitHub Actions CASL Veracode SonarQube
Design	Illustrator Photoshop Figma
Teamwork	Git GitHub GitLab Azure DevOps Bitbucket Jira Confluence Slack Trello
Language	English (EF SET C2 Proficient) Spanish (Native)

Experience

PwC México – Senior Fullstack AI Software Engineer Remote 2023 March – Present

- Technical lead of an international team delivering a fullstack Oracle project.
- Owned code quality across frontend and backend services: resolved Veracode and SonarQube findings and became a Veracode Level 3 Verified Continuous Security Champion.
- Ran code reviews and strategic refactoring to improve maintainability, readability and performance.

Freelance / Contract – Engineering Lead, AI Engineer & Designer Remote 2015 August – Present

Sûl Finance · production financial-hub platform, fintech

- Engineering Lead for a team of five: 228 API endpoints across 60 controllers, 16 domain entities and 182 database migrations (TypeScript, Node, TypeORM, SQL, Next.js).
- Built the AI engineering infrastructure the team adopted: a custom agent harness of 327 skill, agent and rule files for agentic coding workflows, reaching 85% verifiable AI-assisted commits.
- Held API test coverage at 90.7% of statements with CI gates of 80% global and 90/85 per file on fintech surfaces: transfers, commissions, accounts, authentication, authorization and RBAC/tenancy.
- Built release engineering from zero (annotated tags, promotion PRs, drift-guard CI): one release every 4.6 days and a median PR lead time of 2.4 hours across 443 PRs (DORA Elite band).
- Led the migration to AWS ECS Fargate across three environments, the IAM/AuthZ rewrite with CASL, a TypeORM upgrade with 170+ migrations and Next.js 16; authored 248 of 309 architecture decision records.

EnXingaPay · crypto wallet

- Engineering lead end to end: architecture, implementation and visual identity.

AI automation clients · SMBs and a factoring fintech

- Design and deploy agentic automations on Claude, connected through MCP to Gmail, Google Drive and WhatsApp Business, with scheduled routines and human approval before anything runs.
- Built a reusable Claude plugin (skills, tool guards and an execution journal) that runs discovery, automation specs and content production the same way for every client.
- Ran the technical assessment and the technical-lead selection for a factoring fintech.
- Since 2015: full-stack development and design from concept to launch for startups and national and international companies, leading small teams when needed.

Experience (continued)

BlueOptima – Frontend Software Engineer Hybrid 2022 May – 2023 January

- Took features from analysis and documentation to production with no major bugs, on accurate estimates.
- Resolved production-breaking bugs, prevented critical regressions and supported client-specific issues on a legacy Angular codebase.
- Kept quality and compliance with industry standards through unit testing and code review.

Inbright & Xolvex – Frontend Software Engineer Remote 2018 November – 2022 May

- Led a cross-functional team designing and implementing the frontend architecture behind several product launches.
- Managed analysis and task delegation, delivering on time and within budget.
- Partnered with backend engineers to take new products from idea to launch.

Education

Nanotechnology Engineering 2013 August – 2018 December

Instituto Tecnológico y de Estudios Superiores de Occidente

- Managed a nanotechnology laboratory, operating SEM, XPS, AFM and sputtering equipment.
- Used Python and ORCA to simulate molecular systems and particles.
- Synthesized and characterized nanomaterials, including carbon nanotubes and silver and copper nanoparticles.

Personal projects

ORCA Tools

Open-source tool I built to analyze output (.out) files from ORCA, the ab initio quantum chemistry package.

PicoTorrent

Open-source, hackable and lightweight BitTorrent client with a native look, designed for Windows. I contribute the visual side: identity, web and interface design.

Phoenix

Open-source multi-system video game emulator built with Qt 5 and Libretro, designed to be powerful and easy to use. I designed its identity, website and UX/UI.

Professional practices

UDG – CINVESTAV 2018 August – 2018 December

Simulations of organometallic molecular systems and a web app for data analysis

- Simulated organometallic molecular systems with the ORCA ab initio software.
- Built a web app to analyze the simulations: comparison of initial and final geometries, orbital-energy visualization, optimization detection and comparative tables between runs.

Casa y Terrenos 2018 January – 2018 May

Mathematical modeling for business plans and projects using machine learning

- Built a machine-learning solution to develop business plans and projects.
- Implemented a property scoring system based on data quality.
- Managed MySQL and MongoDB databases and a server over SSH tunneling with Python.
